WiseEye is not just a feeder, it is a total game management system. WiseEye patented Species Recognition Technology and operating system allows users to create a calm feeding environment preferred by deer and drastically reduce feed cost by deterring nuisance species. The technology and operating system also allow users to segment various species by feeding specific species at specific locations.

WiseEye is completely controlled by our free GameSet web app on your mobile device. GameSet allows users to select either normally open or normally closed operating system, select target species, select nontarget species, select feed times,

View/download/delete photos of the target species only, view species specific activity graph and more. WiseEye is better built, gives users the tools/features to maximize their time in the field and produces better results.
